

Example:

```
<div ng-app="" ng-init="firstName='John'">
  <p>The name is <span ng-bind="firstName"></span></p>
</div>
```

You can also perform same operation:

```
<div data-ng-app="" data-ng-init="firstName='John'">
  <p>The name is <span data-ng-bind="firstName"></span></p>
</div>
```

You can use **data-ng-**, instead of **ng-**, if you want to make your page HTML valid.

## AngularJS Expressions

AngularJS expressions are written inside double braces: **{{ expression }}**. AngularJS will "output" data exactly where the expression is written:

Example :

```
<div ng-app="">
  <p>My first expression: {{ 5 + 5 }}</p>
</div>
```

AngularJS expressions bind AngularJS data to HTML the same way as the **ng-bind** directive.

```
<div ng-app="">
  <p>Name: <input type="text" ng-model="name"></p>
  <p>{{name}}</p>
</div>
```

## AngularJS Applications

AngularJS **modules** define AngularJS applications.
